“BATTERIES ARE NOW THE SECOND LARGEST USE & FASTEST GROWING SOURCE OF DEMAND FOR NICKEL”

- Batteries consumed around 370kt of primary nickel in 2021 – **increase of 240% over the last 5 years**
- It is estimated that **1.5 to 2.5Mt/y of new battery-grade nickel could be required globally by 2040** – this represents the majority of the current nickel consumption now!!
- **New large mines are needed in the next few years to meet this demand**

ELECTRIC VEHICLE TO DRIVE DEMAND GROWTH FOR DECADES

- EV automobile growth is now ‘how fast?’ – commitments made by EU, China and now the US to support the required infrastructure
- All of the major automobile companies have committed to hybrid and EV vehicles
- Forecast sales for electric vehicles is over 20M per year by 2025 and over 30M per year by 2030

“NICKEL CREEK IS PART OF A SMALL GROUP OF LARGE-SCALE DEPOSITS ABLE TO DELIVER LONG-TERM SUPPLY”

- It typically takes 5-7 years to take a project from a PFS level to production
- Concern with the environmental impact of laterite sourced nickel for ‘green’ EV market
- **HIGH-GRADE SULPHIDES – INSUFFICIENT NEW PROJECTS TO even MAINTAIN EXISTING PRODUCTION levels**
- **LOW-GRADE SULPHIDES – NCP AND OTHERS offer the best opportunity to provide long-term nickel supply but NEED HIGHER LONG-TERM NICKEL PRICES TO SUPPORT PROJECT DEVELOPMENT**

⁽¹⁾ Due to the fragmented small-scale mining of laterite ore in Indonesia, rising production has been accounted for by existing operations
